Javascript/React

Python

HTML/CSS

Linux

## Who I am?

IT professional currently focused on **front-end development**, with a solid background in software development.

I am dedicated to staying current with the latest technologies and modern design patterns in front-end development. Additionally, I am skilled in modifying and maintaining existing (legacy) code to ensure it meets modern requirements. I thrive in flexible work arrangements, being comfortable with both remote and in-office work, though I prefer remote. My technical toolkit includes Linux and macOS for daily tasks and Linux for server management.

Looking ahead, I anticipate Artificial Intelligence will play an increasing role in future development, and I am keen to explore and integrate this area into my skillset.

## Work history

### Software Developer

**eTasku Solutions Oy, Tampere**

Mar 2020 - current

I have actively participated in the development and maintenance of the eTasku web application, focusing particularly on the implementation of the user interface (front-end) using React. We utilize Django for the backend system and a versatile range of other development tools. Our development process is based on the agile Scrum methodology.

### Applications programmer

**Autovista Oy, Espoo/Tampere**

Dec 1998 - Oct 2019

Maintenance and development of vehicle data transfer applications and services. Used stack was Java, Python, Talend ETL, Linux shell scripts and pinch of a C++.
